

We went over Homework fundamentals 2, here are some points:

- Reference code so you can go back and find it in the notes
Ex. // ref 3 pg 109.
- Use text and .textleft at your discretion, .textleft aligns the printed text to the left
- Ch032HWSampleYName

Text can also be Italicized

```
// Big Name on Graphics Screen  
Font bigFnt = new Font("Arial", Font.PLAIN, 40);
```

Tip: If we want to print just totalCost but without text.

```
mealScr.textLeft(140,260, "" + totalCost);
```

This does not work because Java reads left to right and expects text after the comma

```
mealScr.textLeft(140,260,totalCost);
```

First Exam: either 9/19 or 9/26 Thursday

Multiple choice / TF / Fill in the blank on Scantron and hand written code.

We drew two lines in an X with a gray screen.

Then we did a target depending on our last names

I had a hard time with the diagonal lines, took me a while figure out. I asked a classmate and he helped me.

I had a hard time with the eyes and nose, the ellipses

This is what I got
